

Pilot & Data Request

EnergyLens turns the energy data a building already has into a clear answer to one question: which building to improve first, what it will cost and save, and which subsidies (BAFA/KfW) apply. No new hardware needed.

This sheet sets out a free, no-obligation pilot and the data that helps. Even the minimum (floor areas plus 12 months of bills) already produces a real result.

1 · About you

Company / organisation: _____

Contact name & role: _____

Email / phone: _____

Buildings in portfolio: _____ Main types: _____ Location(s): _____

2 · What data can you share? (tick what exists)

Minimum — start within days:

- ☐ Building list: name/code, floor area (m²), use type, year built
- ☐ Electricity bills, 12 months (kWh + €)
- ☐ Gas / district-heating bills, 12 months
- ☐ Energy Performance Certificate (Energieausweis), if any

Richer pilot — optional:

- ☐ Interval / half-hourly electricity data · tariff & contract (€/kWh) · occupancy / hours
- ☐ Sub-meter, BMS/BAS export, HVAC specs, solar / battery, refrigerant log

3 · A few quick questions (your view helps even without a pilot)

- a) Biggest concern now: ☐ EPBD/MEPS ☐ energy cost ☐ CO₂ reporting ☐ capital planning
- b) Use any software for this today? ☐ No ☐ Yes: _____
- c) Would a prioritised “fix this building first + subsidy” plan be useful? ☐ Yes ☐ Maybe ☐ No
- d) Open to a short pilot on 1–3 buildings? ☐ Yes ☐ Tell me more ☐ Not now

4 · What you get / terms

- A live dashboard + end-of-pilot report: EPBD/MEPS risk, prioritised retrofit ROI, BAFA/KfW capture, per building.
- Free, time-boxed (6–8 weeks), fully managed by me. Your data stays in the Microsoft cloud, row-level isolated, deleted on request. No personal data; NDA on request.
- I provide weather, grid factors, prices and regulatory data myself — you don't send those.
