

ESRS E-1 Climate Change

Quantitative auto-filled · narrative editable

Reporting year 2025

ESRS-E1-aligned reporting **support**. The quantitative datapoints (E1-5 energy, E1-6 GHG) are auto-filled from metered building data; the narrative disclosures (E1-1...E1-4, E1-7...E1-9) are written by the company in the narrative editor (a guided draft is shown until you save your own). Scope 3 is estimated. This is not an audited or assured disclosure, nor a CSRD filing.

E1-1 Transition plan for climate change mitigation

Narrative — to complete

ESRS asks: Is there a transition plan aligned with limiting warming to 1.5°C, with targets, actions and financing?

EnergyLens evidence: 1 assets assessed; 0 already past the CRREM 1.5°C pathway, 0 stranding by 2030 (avg stranding year 2045).

[Company] is developing a climate transition plan aligned with a 1.5°C pathway. EnergyLens CRREM analysis identifies the assets at stranding risk and a prioritised retrofit pathway (heat pumps, envelope insulation, on-site solar). [Add governance, milestones, decarbonisation levers and the financing plan.]

E1-2 Policies related to climate change mitigation and adaptation

Narrative — to complete

ESRS asks: What policies manage climate mitigation, adaptation, energy efficiency and renewable deployment?

[Company]'s energy & climate policy commits to reducing energy demand, increasing on-site renewables and phasing out fossil heating across the portfolio. [State the policy owner, scope, and how it is monitored.]

E1-3 Actions and resources

Narrative — to complete

ESRS asks: What concrete actions and financial / operational resources support the targets?

EnergyLens evidence: Decarbonisation measures identified by EnergyLens (heat pump, insulation, solar PV, LED, BMS) with per-building ROI are available in the recommendations engine.

Planned actions include [the prioritised retrofit measures], with an estimated investment of [€...] and an expected reduction of [... tCO₂e/yr]. [Confirm which actions are committed, their budgets and timelines.]

E1-4 Targets related to climate change mitigation and adaptation

Narrative — to complete

ESRS asks: What measurable GHG-reduction targets (base year, scope, science-based?) are set?

EnergyLens evidence: Baseline gross emissions 820.3 tCO₂e (Scope 1+2 location + 3, 2025).

Base year [20YY]: [baseline] tCO₂e gross. Target: reduce gross Scope 1+2 emissions by [X]% by [20YY] against this base year. [State scope coverage, interim targets and whether the target is science-based (SBTi).]

E1-5 • ENERGY CONSUMPTION AND MIX • 2025

TOTAL ENERGY

424 MWh

metered consumption

RENEWABLE SHARE

16.8 %

on-site solar self-consumed

FLOOR AREA

5,200 m²

1/1 buildings

ENERGY INTENSITY

82

kWh/m²·yr

RENEWABLE ENERGY

71.1 MWh

on-site solar self-consumed

NON-RENEWABLE ENERGY

352.9 MWh

grid electricity + fossil heating

E1-5 disaggregation: renewable = on-site solar self-consumed; non-renewable = grid electricity + fossil heating fuel. A finer fossil split (coal / oil / gas) follows the fuel mix; nuclear is not applicable on-site. Purchased renewable electricity (green tariffs / Guarantees of Origin) is not counted here, so the renewable share is conservative. Energy intensity per net revenue (the E1-5 monetary datapoint) requires a revenue figure — [add company net revenue to complete].

E1-6 • GROSS SCOPES 1, 2, 3 AND TOTAL GHG EMISSIONS • 2025

SCOPE 1

3.5

tCO₂e — direct combustion

SCOPE 2 (LOCATION)

118.1

tCO₂e — grid

SCOPE 2 (MARKET)

235.7

tCO₂e — contractual

SCOPE 3 (EST.)

698.7

tCO₂e — value chain, incl. commuting (est.)

OPERATIONAL (SCOPE 1+2)

121.6

tCO₂e — building energy (EPBD/CRREM basis)

OPERATIONAL INTENSITY

23.4

kg CO₂e/m²·yr — building energy

TOTAL (LOCATION)

820.3

S1+S2(loc)+S3

TOTAL (MARKET)

937.9

S1+S2(mkt)+S3

GHG INTENSITY

0.158

tCO₂e/m² — incl. value chain

DATA QUALITY

0/1

complete · rest estimated

BUILDING	SCOPE 1	SCOPE 2 (LOC)	SCOPE 3	TOTAL (LOC)	INTENSITY
Berliner Bürogebäude Alpha OFFICE	3.5	118.1	698.7	820.3	0.158

Scope 1+2 are disclosure-grade (metered building energy). Scope 3 is a screening estimate (categories 1, 3, 5, 6, 7 and 13 — incl. business travel & employee commuting) and not disclosure-grade. Gross emissions are shown without netting (no removals or credits deducted). GHG is reported as CO₂e using IPCC AR6 GWP-100; building emissions are predominantly CO₂ (on-site combustion + grid electricity). No biogenic CO₂ arises in this portfolio (it is reported separately from the scopes if biomass is later used). GHG intensity per net revenue (the E1-6 monetary datapoint) requires a revenue figure — [add company net revenue]. Base year for target tracking: [set the first complete reporting year].

E1-7 GHG removals and carbon credits

Narrative — to complete

ESRS asks: Are GHG removals or carbon credits used? Quantify and describe.

No GHG removals or carbon credits are claimed for this reporting period. [Update if the company purchases credits or operates removal projects.]

E1-8 Internal carbon pricing

Narrative — to complete

ESRS asks: Is an internal carbon price applied in decision-making?

No internal carbon price is currently applied. [If used, state the price (€/tCO₂e), scope, and how it informs investment decisions.]

E1-9 Anticipated financial effects from material climate risks

Narrative — to complete

ESRS asks: What are the anticipated financial effects of physical and transition risks?

EnergyLens evidence: Transition risk: 0 assets already past the 1.5°C pathway, 0 stranding by 2030. Rising national CO₂ price (€55–65/t in 2026) and EU ETS2 from 2028 increase operating cost.

Transition risk: carbon pricing raises operating costs and assets at CRREM stranding risk require retrofit capex of [€...] to stay marketable / financeable. Physical risk: [assess heat / flood exposure].
[Quantify the effects on the company's financial position, performance and cash flows.]

Prepared with reference to ESRS E-1 (Climate Change). Quantitative datapoints are auto-filled from metered energy + the GHG inventory (Scope 1+2 disclosure-grade, Scope 3 estimated). Narrative disclosures are written and approved by the company. This document is reporting support — it is not audited, assured, or a CSRD/ESRS filing, and the revised ESRS datapoint set should be confirmed against the final delegated act.
